Week 10 Final Project

Software Engineering | Submission and Final Report Template

Project title: Seeking Pips

Student name: Enzo Nunez PID: enzonunez

Course / section: 83521

Submission links

Discovery deployment: [Paste the working Discovery URL]

Private repository: https://github.com/enzoluznunez/CS-2104-Project

Final demonstration: uploaded to canvas

Honor code statement:

As a Hokie, I will conduct myself with honor and integrity at all times. I will not lie, cheat, or steal, nor will I accept the actions of those who do.

LLM-use statement:

I used Claude Code by Anthropic for Code generation and debugging.

Final report | Week 9 time comparison

Planned time versus actual time

Revisit your Week 9 timeline from the Week 8 proposal. Keep the original planned tasks, hours, and details visible, then describe how you actually spent the time.

Task / milestone	Week 8 plan	Actual time and work
Design the project structure and plan	**Planned hours:** 1 **Original details:** *The first step will be to create a local repository on GitHub with, then write the README…*	**Actual hours:** 0.5 **Work completed:** Mapped out architecture, created repository and added GTAs. **Changes from plan:** Shorter since I was familiar with GitHub and system design.
Code the basic functionality	**Planned hours:** 1 **Original details:** *I'll use one of the LLMs on ARC to go ahead and build out a website using HTML for the…*	**Actual hours:** 0.5 **Work completed:** Set up Claude Code in my local folder and input project overview. **Changes from plan:** Didn't take as long as I thought it would, used to Claude Code.
Test and debug the initial version	**Planned hours:** 1 **Original details:** *The trick with testing, whether its unit, integration, or even regression is to go slow…*	**Actual hours:** 1 **Work completed:** Tested basic functionality by walking through each subfolder. **Changes from plan:** Unit was super fast, integration and regression took longer to set up.
Refine and prepare the submission	**Planned hours:** 1 **Original details:** *For this first submission, I would like the website running locally, with data living on Flask…*	**Actual hours:** 1 **Work completed:** Checking Canvas page and assignment template. **Changes from plan:** Took about as long as expected since I double check.

Week 9 totals: Planned: 4 Actual: 3

Explain the comparison

The setup took a lot less longer than I expected because of, in my opinion, my experience with using tools like GitHub and LLMs.

For additional unplanned work, add a row and enter "Not originally planned" in the Week 8 plan column.

Final report | Week 10 time comparison

Planned time versus actual time

Revisit your Week 10 timeline from the Week 8 proposal. Keep the original planned tasks, hours, and details visible, then describe how you actually spent the time.

Task / milestone	Week 8 plan	Actual time and work
Design and code an additional feature	**Planned hours:** 1 **Original details:** *One feature that I think would be cool is a feature that gives users a quick and…*	**Actual hours:** 1 **Work completed:** Debated between different benchmarks, landing on investments. **Changes from plan:** Fleshed out feature from original plan.
Test and debug the final version locally	**Planned hours:** 1 **Original details:** *I would like to test each page while the site is still local, that includes the betting page…*	**Actual hours:** 0.25 **Work completed:** Used Claude Code for refining test cases. **Changes from plan:** Switched from KIMI K3 to Claude Code.
Deploy, test, and debug	**Planned hours:** 1 **Original details:** *This will be where I lean on models form Google and OpenAI for deep…*	**Actual hours:** 2 **Work completed:** Deployed on Discover. **Changes from plan:** Took a lot longer than expected, Discovery took longer to figure out.
Refine and prepare the final submission	**Planned hours:** 2 **Original details:** *This is where I get to really show my creativity, including video and report styling…*	**Actual hours:** 0.5 **Work completed:** Reviewed Canvas page and demo videos for local and hosted pages. **Changes from plan:** Not that much.

Week 10 totals: Planned: 5 Actual: 3.75

Explain the comparison

Honestly the part that might not have taken the longest but was the most confusing was deploying on Discovery. Even though I've used it before, I was surprised at how long it took me to deploy.

For additional unplanned work, add a row and enter "Not originally planned" in the Week 8 plan column.

Final report | Consultation and use of LLMs

Consultation description

Describe how you actually sought advice or feedback from peers, mentors, or online communities and how that help affected your work. If you did not consult anyone, state that clearly.

I did not receive any consultation during this assignment.

Use of LLMs

Describe actual LLM use, not the intended use from Week 8. Keep this reflection consistent with the LLM-use statement on the first page. If you did not use LLMs, state that clearly.

I used Claude Code by Anthropic in my local repository, including with /code and /tests for example with writing HTML for structure and CSS for trying out lots of website styles.

AI has a tendency to create pretty generic looking websites so I tried prompting for a more unique style that I liked, changing between several color themes and bet page layouts before landing on the final one.

Before submitting

[ ] Verify that the final site is interactive and accessible, integrates HTML, CSS, Flask, Python, and SQLite, and works in a container locally and on Discovery. Test the additional flagship feature in both places.

[ ] Check that the viewable video shows the local container and Discovery versions, demonstrates what changed after Week 9, explains the five technologies, and describes something new you learned.

[ ] Confirm the private repository has teaching-team Maintainer access; code/, data/, tests/, docs/, report/, and README.md; current setup/run instructions and the final video link; code comments and final test evidence; and task-based commits of 100 lines of code or fewer.

[ ] Include honor code and LLM statements in the submitted PDF and each repository file. Complete both time-comparison tables and the consultation and LLM reflections.

[ ] Check all submission links, , follow course formatting, and export the completed submission to PDF for the Canvas upload.
